The product has many sizes including industry, home use, small businesses to industrial plants, municipalities in various communities.

Oklin, the world's leading intelligent food composting solutions .Our success is driven by quality and a commitment to participate in solving social and business problems, to be friendly to environment and meet the needs of modern business that grows with the sustainability of the community.

Working principle of Oklin composter

An innovative food waste composter using biotechnology reduces the amount of food waste by 80-90% in 24 hours. Food waste in landfill produces methane, one of the gas that causes global warming. Oklin composter help reduce methane, and reduce the numbers of garbage collected per week as well as carbon footprint
